

COMICCRAFT AI

Comic Story Creator using Gemini Models

FRONT COVER IMAGE — EMPTY SPACE

Place your generated character / comic cover image here.

Recommended: portrait composition, main character centered, title area kept clear.

TITLE: _____

CREATED BY: _____

DATE: _____

1. Comic Project Structure

A practical Gemini workflow is: create the story first, define consistent characters, write the comic page-by-page and panel-by-panel, generate the visual references, then assemble the finished pages into a PDF. This approach is also used in current Gemini-based comic projects and documented workflows. [\[cite\]turn0search1](#)

Suggested order

- Story idea → short synopsis
- Character reference sheet → front / side / back views
- Art-style reference → line, color, lighting and mood
- Page script → panel-by-panel visual description + dialogue
- Generate each page separately
- Review character consistency and regenerate when needed
- Export pages and combine into the final PDF

2. Sample Story

Title: The Last Paper Plane

Premise: A curious student finds an old paper plane carrying a mysterious message. Following its clues leads to a forgotten rooftop garden where the student discovers a small way to help the school community.

3. Character Reference / Sample Photo Description

Character	Sample visual description
Ari	13-year-old student, short dark hair, round glasses, blue hoodie, backpack with a small star patch. Friendly expression. Keep
Milo	Small orange-and-white cat, green collar, expressive eyes, slightly oversized ears. Playful but gentle body language. Keep

Gemini character-sheet prompt

Create a clean comic-book character reference sheet for Ari. Show front view, side view and back view. Keep the character design identical across all views: 13-year-old student, short dark hair, round glasses, blue hoodie, backpack with a small star patch. Neutral white background, full body, clear proportions, simple professional comic concept-art presentation, no text or logos.

4. Sample Photo / Panel Descriptions

Panel 1 — Wide establishing shot. Ari walks through a quiet school corridor after class. Warm afternoon light enters through the windows. Ari notices a folded paper plane on the floor.

Panel 2 — Medium shot. Ari picks up the paper plane and carefully unfolds it. The cat Milo sits nearby, looking curious. Focus on Ari's surprised expression.

Panel 3 — Close-up. The paper contains a simple hand-drawn map leading toward the school rooftop. Keep the map readable as a visual prop but do not add tiny illegible writing.

Panel 4 — Wide rooftop shot. Ari opens the rooftop door and discovers a small neglected garden. Milo walks ahead. Golden-hour lighting, hopeful mood.

Panel 5 — Final cinematic shot. Ari and Milo begin watering the plants. The school buildings appear softly in the background. Leave clear negative space at the top for a caption.

5. Gemini Page Prompt Template

Render comic page 1 using the established character reference. Create a professional comic-book page with consistent character appearance, clear panel separation, readable composition, cinematic lighting, and a coherent visual flow. Use the panel descriptions exactly as the story guide. Do not invent new characters or change clothing. Keep dialogue areas visually uncluttered. Leave intentional empty space wherever a speech bubble or caption will be placed later. Generate the artwork without embedded text unless specifically requested.

6. Front Page / Cover Layout

For the cover, keep the large image area intentionally empty until the final cover artwork is generated. A useful layout is: title at the top, large portrait-oriented hero image in the center, and creator information at the bottom. If the cover image will be generated separately, ask Gemini to keep the upper region visually simple so the title can be added afterward.

Cover-image prompt

Create a portrait comic-book cover for 'The Last Paper Plane'. Show Ari standing on a school rooftop with Milo beside them, holding a folded paper plane. Warm sunset sky, hopeful adventurous mood, polished modern comic illustration, strong silhouette, cinematic composition. Keep the upper 20 percent relatively uncluttered and free of important visual details so a title can be added later. No written words, logos, watermarks, or speech bubbles.

7. Empty-Space Rules

- Front cover: reserve a large central image area before inserting the final artwork.
- Title area: keep the top region visually simple.
- Speech bubbles: leave clean space near the speaking character.
- Captions: reserve consistent rectangles or margins rather than covering important artwork.
- PDF assembly: keep the same page size and margins for every page.

8. Suggested PDF Page Order

Page	Content
1	Front cover — title + large image area
2	Character reference / cast
3	Comic page 1
4	Comic page 2
5	Comic page 3
6	Comic page 4
7	Comic page 5
8	Back cover / credits

Note: AI image generators can vary in character consistency and text rendering. For reliable comic lettering, generate the artwork with clean empty areas and add speech bubbles/captions during page layout.
